Testing Notes: Current Version

1. The process to run locally/in turn this does affect in the normal deployment varies on different devices. In which the pip requirements.txt requires some changes and removal of some packages being those of uvicorn==0.31.0 and uvloop==0.21.0 that aren't supported by Windows apparently.
   a. Another set of packages that can give problems is the "openelementary" set of packages that require changes to installing packages one by one to ensure functionality and use of the chatbot.
2. The current big issue in this version is the pdf uploader in the site that ignores pdfs and makes errors. Despite trying three separate syllabuses. Regular functions work but aren't responding to the general purpose of the chatbot.

Key notes for fixing

1. Change the requirements.txt or install certain packages to then leave others to be installed manually for less time consumption for trouble shooting.
2. More work in getting the pdf uploader to accept their only file type for further testing.
   a. (small note) some textures are missing in the chatbot, but not to much of a concern.

hello

Hello! I am the internship chatbot for UNH. How may I assist you today?

what is the purpose of the class

The purpose of the class, particularly COMP 820 Database Systems and Technologies, is to provide students with a comprehensive understanding of database systems, their management, and the technologies that support database functionality. This course is designed to enhance your skills in analyzing user needs and developing computing systems that effectively meet these requirements. It also incorporates elements of project management and team collaboration, using tools like Jira and Scrum workflows to simulate real-world IT project environments.
